As tournament players, perhaps we sometimes feel pressured to make a move earlier in a poker tournament than we'd ideally like to. Maybe the situation is not perfect, but we've noticed the blinds-levels appear to be going up rapidly. Unless we take the current opportunity, we could easily end up becoming hopelessly short-stacked.

If we had the luxury of never needing to worry about running out of chips, perhaps we would have passed up on the marginal opportunity that faces us in favour of a much stronger situation. Unfortunately, this is not how tournament poker works. We can't go around playing individual hands in isolation. We have to seriously consider something that isn't a factor for cash game players - our tournament life.

The best decision at a tournament table is always going to take into account the effective stacks and the blind-levels. We are interested in how "healthy" our stack is relative to the blinds, which will help to dictate our strategy. If only there was a formula we could use to help us calculate this...

Actually, there is – it's commonly referred to as "M-ratio" or just "M" for short.

Table of Contents

M Ratio – The Calculation

The idea behind "M" is that it tells us how many rounds we will last given our current stack size and the size of the blinds/antes.

So let's see if we can calculate our M for a simple tournament situation.

Question – We have R\$1,000 in our stack. The SB is R\$10, the BB is R\$20, and the antes are R\$1 and we are playing 10-handed. What is our M?

We simply need to add the relevant values to the formula. "Antes" stands for total antes that are played in a round and would, therefore, be calculated as:

Ante-price * number of players

We are interested in the amount we pay for antes in the entire orbit, rather than just the value of an individual ante. So in this case, if the value of an individual ante is R\$1 and we have to pay it ten times per orbit, we will pay a total of R\$10 in antes each orbit.

$$M = R\$1000 / (\$10 + R\$20 + R\$10)$$

$$M = R\$1000 / R\$40$$

$$M = 25$$

An M of 25 essentially means that we can last another 25 orbits, assuming the structure of the hands remains the same. Which of course, it won't, because soon the next blind level will arrive and our M will become considerably reduced. So having an M of 25 in a regular tournament is not

the same as having an M of 25 in an ultra-turbo tournament. The blind structure must be taken into consideration.

Using M Value to Make Decisions

We now have calculated our value for M, but on its own, it's not going to be especially useful. How can we use our value for M to help us define our strategy in a tournament setting?

In his book *Harrington on Hold'em*, Dan Harrington provided some rough guidelines for how we should evaluate and use our value for M. He defined several zones in which the value of M may fall, and described what our resulting strategic outlook should be.

M is greater than 20 – The Green Zone – With an M larger than 20 we typically have the luxury to choose whichever style we prefer, whether that be a conservative or aggressive style. We have enough time to be patient and wait for strong holdings, but we also have the freedom to dabble with more speculative hands and play aggressively. Taking some losses is not a huge problem at this stage, and the effective stacks are still deep enough that we can get away with expanding our range in some scenarios.

M is 10-20 – The Yellow Zone – Now we are starting to feel the time pressure a little bit. We must start looking for spots to get involved and play hands. Some of the more speculative poker hands we may have been able to play while in the green zone may now suffer from reduced playability. This reduction is a result of the smaller effective stacks.

M is 6-10 – The Orange Zone – The pressure tightens here, and we want to avoid wasting any chips. Cold-calling starts to become risky. Our main focus should be trying to be the first player involved in the pot, wherever possible. If we are the ones open-raising, we have increased expectation as a result of additional fold-equity. This is valuable here since every chip counts.

M is 1-6 – The Red Zone – We have now reached what is known as the push/fold stages of tournament poker. We only have two options at this stage: Move all-in or fold.

M is less than 1 – Dead Zone – We should avoid this particular zone at all costs. Nearly everything is dependent on luck at this stage. We want our tournament career to be about skill, not luck. We should look for a spot where we are first to act and shove all-in, hoping to get lucky. Players have gone on to win big tournaments even after arriving at the dead-zone, so not all hope is lost. In most cases, though, our tournament life is over.

Adjustment for Shorthanded Tables

The M calculation works for tables of all sizes. The number of orbits we have left, won't change hugely based on the number of players at the table. It will change slightly, since we will pay a different amount of antes, meaning we will have slightly more orbits remaining assuming the tables get shorthanded. (Usually the tables will get shorthanded only when approaching the final table. For the most part, we will be playing tournaments with max capacity).

But is having an M of 5 on a 5-handed table the same as having an M of 5 on a 10-handed table? Not really. Although the remaining number of orbits won't change that much, we will have twice as many opportunities to play hands on the 10-handed table.

To help us deal with this, we can make use of what is known as effective M, which takes into account the need to make faster decisions when the tables become shorthanded. We can refer to the standard value of the M calculation as simple M.

The relationship between the two is as follows:

Essentially, we are taking a percentage of Simple M based on how "full" the table is, assuming that a full table contains 10 players. So if a player has a simple M of 10 on a 5-handed table, then he has an effective M of 5.

Let's try a question to put everything together.

Question – Effective stacks are R\$1,000. Blinds are R\$20/40 with antes of R\$2. We are 5 handed. Calculate simple M and effective M.

Okay, hopefully, you should be able to do this on your own. The calculation is below:

Simple M

$$\frac{\$1000}{(\$20 + R\$40 + (\$2 * 5))}$$

$$\frac{\$1000}{(\$20 + R\$40 + R\$10)}$$

$$\frac{\$1000}{R\$70}$$

Simple M = 14.3

Effective M

$14.3 * (5/10)$

$14.3 * 0.5$

Effective M = 7.15

So the next time we are at the poker tables, let's try to be aware of our M-ratio. Use it to help define the strategy we will be using at any given stage of the tournament.

Clínica de aborto de Whole Woman's Health abre en Virginia, en medio de una guerra divisiva sobre el aborto en EE. UU.

Con su cabello rubio recogido en una trenza de cola de caballo, una pequeña cruz de oro colgando de su cuello y ataviada con batas verdes de enfermería cubiertas de ranas de dibujos animados, Brenda Morgan se mostró cortés pero firme al dar instrucciones a sus empleados de la clínica.

Es poco probable que la gente levante el teléfono si no reconoce el número, así que probablemente tendrás que dejar un mensaje de voz, advirtió a un trío de trabajadores. Cuando dejes ese mensaje, continuó, nunca digas que estás llamando desde Whole Woman's Health. En su lugar, sugirió que dijeran algo vago, como: "Este soy yo, Brenda, de la oficina de tu doctor. Por favor, devuélveme la llamada."

La última cosa que quieren es que la persona equivocada escuche el buzón de voz y se dé cuenta de que una clínica de abortos está llamando.

Los trabajadores miraron los teléfonos sobre el escritorio. Proteger la privacidad de un paciente es primordial, pero tienen poco tiempo para perfeccionar su técnica de buzón de voz. Menos de 24 horas después, esa clínica, la última adición a la red de clínicas de abortos de Whole Woman Health, daría la bienvenida a su primer paciente.

En los dos años desde que la Corte Suprema de EE. UU. derogó Roe v Wade y permitió que más de una docena de estados prohibieran casi todos los abortos, más de 100 instalaciones han dejado de proporcionar abortos. Se han establecido nuevas clínicas en estados que aún permiten el procedimiento, pero no hay suficientes para compensar las que cerraron. Muchas de estas clínicas también se encuentran en estados sólidamente liberales, en el norte.

Whole Woman's Health abrió esta clínica porque saben cuántas personas viajan desde la región

Por el contrario, la clínica más reciente de Whole Woman's Health - que abrió discretamente la semana pasada - se encuentra en Petersburg, Virginia, dentro

La nueva clínica de abortos de Whole Woman's Health en Petersburg, Virginia, abrió el 22 de agosto de 2024.

De Florida y los estados vecinos deben viajar cientos de millas para abortar.

"No abrimos esto solo porque de Florida", dijo Amy Hagstrom Miller, fundadora de Whole Woman's Health. "Abrió esta clínica porque sabemos cuántas personas viajan desde la región."

'Probablemente debería haber renunciado antes'

Por muchos años, Whole Woman's Health fue el rostro del aborto en Texas, donde operaba un puñado de clínicas. En 2024, la organización ganó un caso de la Corte Suprema de EE. UU. que derribó varias restricciones de aborto de Texas; en ese momento, la decisión parecía ser una señal de que la guerra sobre los derechos de aborto estaba girando a su favor.

Ocho años después, Roe se ha ido y Texas ha prohibido casi todos los abortos. Whole Woman's Health ha cerrado sus clínicas de Texas, así como otra clínica en Indiana, que también ha prohibido el procedimiento.

La presidenta y directora ejecutiva de Whole Woman's Health, Amy Hagstrom Miller, en la nueva clínica de abortos el 21 de agosto.

Fue devastador, emocional y financieramente. Llevó más de un año vender los edificios donde habían operado sus clínicas. (Un grupo ant-abortion compró más tarde uno de los edificios.) Salir de un arrendamiento le costó decenas de miles de dólares.

"Esas cosas operativas son reales. Pueden derribar
